AI Solution Design and Build Bundle

SEIRMS: Sales Execution Intelligence & Risk Management System

AI-Assisted Sales Execution Early Warning and Decision Support Framework

Student Name: Balamurali
Roll Number: 25PGDM046
Organization: ITC Limited – Tobacco Division

---

1. BUSINESS PROBLEM

Sales execution within ITC's distribution network generates significant operational data relating to outlet coverage, billing frequency, stock availability, strike rate, route productivity, and retailer engagement. These metrics are captured through CSR-Radar and related reporting systems.

Although substantial data is available, Territory Leaders often need to review multiple reports to identify performance gaps, stock shortages, unbilled outlets, low-productivity routes, weak visibility, and execution risks. This process can be time-consuming and may delay managerial intervention.

The key challenge is not data availability but converting operational metrics into actionable managerial intelligence that supports faster and more effective decision-making.

To address this challenge, the SEIRMS framework was developed as an AI-assisted decision-support solution.

---

2. SELECTED AI TOOL / APPROACH

AI Tool

ITC Sales Execution Intelligence Assistant (Custom GPT)

Supporting Components

- Retail Health Score (RHS)
- Territory Intelligence Score (TIS)
- Sales Execution Risk Index (SERI)
- SEIRMS Dashboard Prototype

AI Approach

The solution uses a rule-based AI-assisted analytical framework built using Custom GPT technology. The AI assistant interprets sales execution metrics, evaluates outlet and territory performance, identifies risks, and generates managerial recommendations.

The objective is to support managerial decision-making rather than replace human judgment.

---

3. SOLUTION LOGIC

The framework converts operational sales execution metrics into structured business intelligence.

Retail Health Score (RHS)

Measures outlet health using:

- Coverage
- Billing Frequency
- Stock Availability
- Brand Visibility
- Productive Calls

Territory Intelligence Score (TIS)

Measures territory performance using:

- Coverage
- Strike Rate
- Productive Calls
- Stock Availability
- Route Productivity

Sales Execution Risk Index (SERI)

Measures:

- Coverage Gap Risk
- Stock-Out Risk
- Unbilled Outlet Risk
- Route Productivity Risk

The AI assistant interprets these outputs and generates recommendations based on identified performance gaps and risk levels.

---

4. PROTOTYPE / WORKING MODEL

SEIRMS Dashboard Prototype

The dashboard prototype was developed to demonstrate how sales execution metrics can be transformed into decision-support outputs.

Dashboard Features

• RHS Calculation

• TIS Calculation

• SERI Calculation

• Territory Classification

• Risk Assessment

• AI-Based Recommendations

ITC Sales Execution Intelligence Assistant

The Custom GPT serves as the analytical layer of the framework.

Functions

• Territory Analysis

• Outlet Analysis

• Risk Identification

• Recommendation Generation

• Framework Explanation

• Performance Interpretation

The prototype successfully demonstrates how Artificial Intelligence can support sales execution analysis.

---

5. BUILD NOTES

The development process followed a structured approach.

Step 1: Business Problem Identification

Observed the difficulty of interpreting multiple sales execution reports and identifying performance exceptions.

Step 2: Metric Selection

Selected key sales execution indicators:

• Coverage

• Billing Frequency

• Stock Availability

• Brand Visibility

• Productive Calls

• Strike Rate

• Route Productivity

Step 3: Framework Development

Developed:

• Retail Health Score (RHS)

• Territory Intelligence Score (TIS)

• Sales Execution Risk Index (SERI)

Step 4: Dashboard Development

Created a dashboard prototype capable of generating analytical outputs and recommendations.

Step 5: Custom GPT Development

Built the ITC Sales Execution Intelligence Assistant and uploaded framework knowledge files.

Step 6: Testing and Validation

Tested the framework using representative sales execution scenarios.

---

6. INPUT–OUTPUT FLOW

Inputs

• Coverage (%)

• Billing Frequency (%)

• Stock Availability (%)

• Brand Visibility

• Productive Calls (%)

• Strike Rate (%)

• Route Productivity (%)

↓

Processing Layer

• RHS Calculation

• TIS Calculation

• SERI Assessment

• Risk Classification

↓

Outputs

• Outlet Health Assessment

• Territory Performance Assessment

• Territory Classification

• Risk Identification

• Managerial Recommendations

• Priority Action Areas

---

7. BASIC TESTING EVIDENCE

Test Scenario 1 – Healthy Territory

Coverage = 90

Strike Rate = 88

Stock Availability = 92

Route Productivity = 89

Output

Strong Territory

Low Risk

Maintain Current Performance

Test Scenario 2 – Moderate Territory

Coverage = 70

Strike Rate = 65

Stock Availability = 68

Route Productivity = 66

Output

Moderate Territory

Moderate Risk

Focused Improvement Recommended

Test Scenario 3 – High-Risk Territory

Coverage = 50

Strike Rate = 45

Stock Availability = 40

Route Productivity = 42

Output

High Risk Territory

High Risk

Immediate Corrective Action Required

Testing Outcome

The framework successfully differentiated between healthy, moderate, and high-risk performance conditions. The generated outputs aligned with the underlying sales execution indicators and demonstrated the ability to provide structured managerial insights and recommendations.

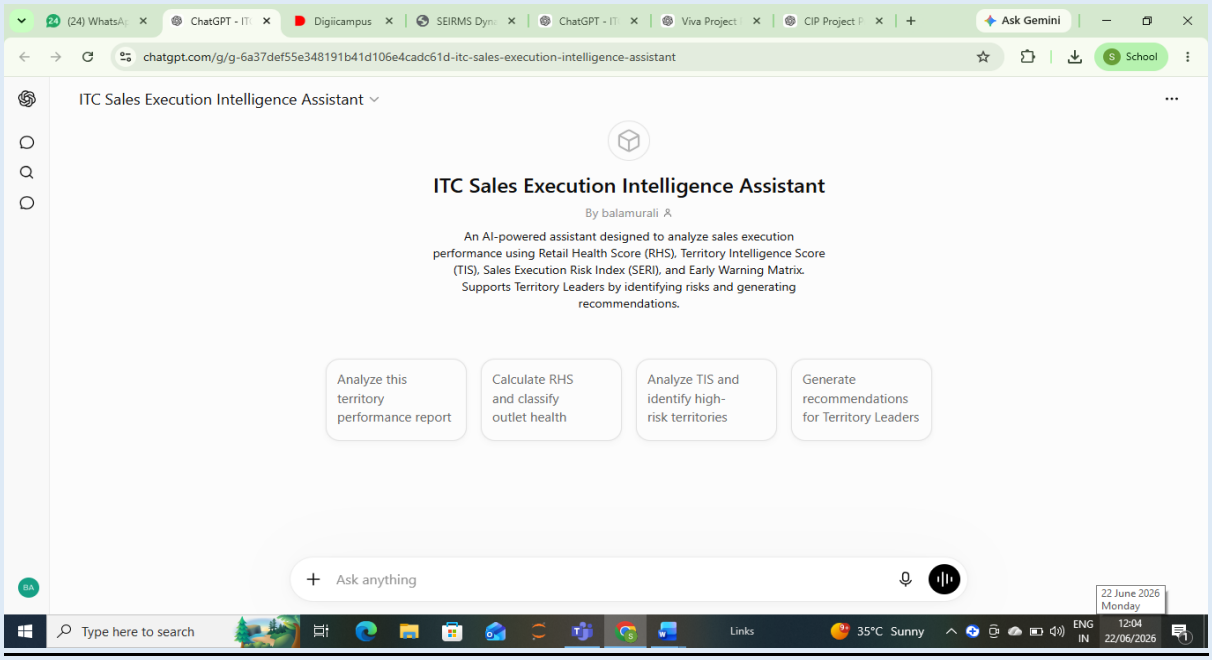

---

8. CONCLUSION

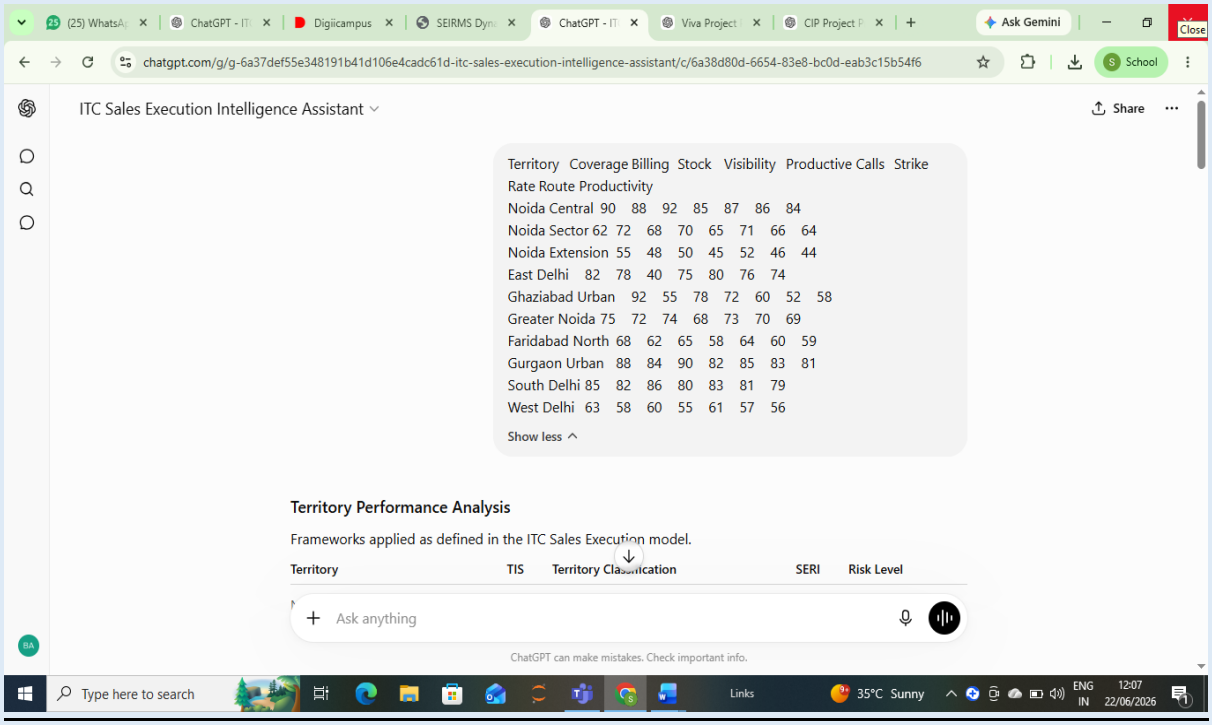

The SEIRMS framework demonstrates the practical application of Artificial Intelligence in sales execution management. By integrating Retail Health Score (RHS), Territory Intelligence Score (TIS), Sales Execution Risk Index (SERI), Dashboard Analytics, and a Custom GPT assistant, the solution converts operational data into actionable managerial intelligence.

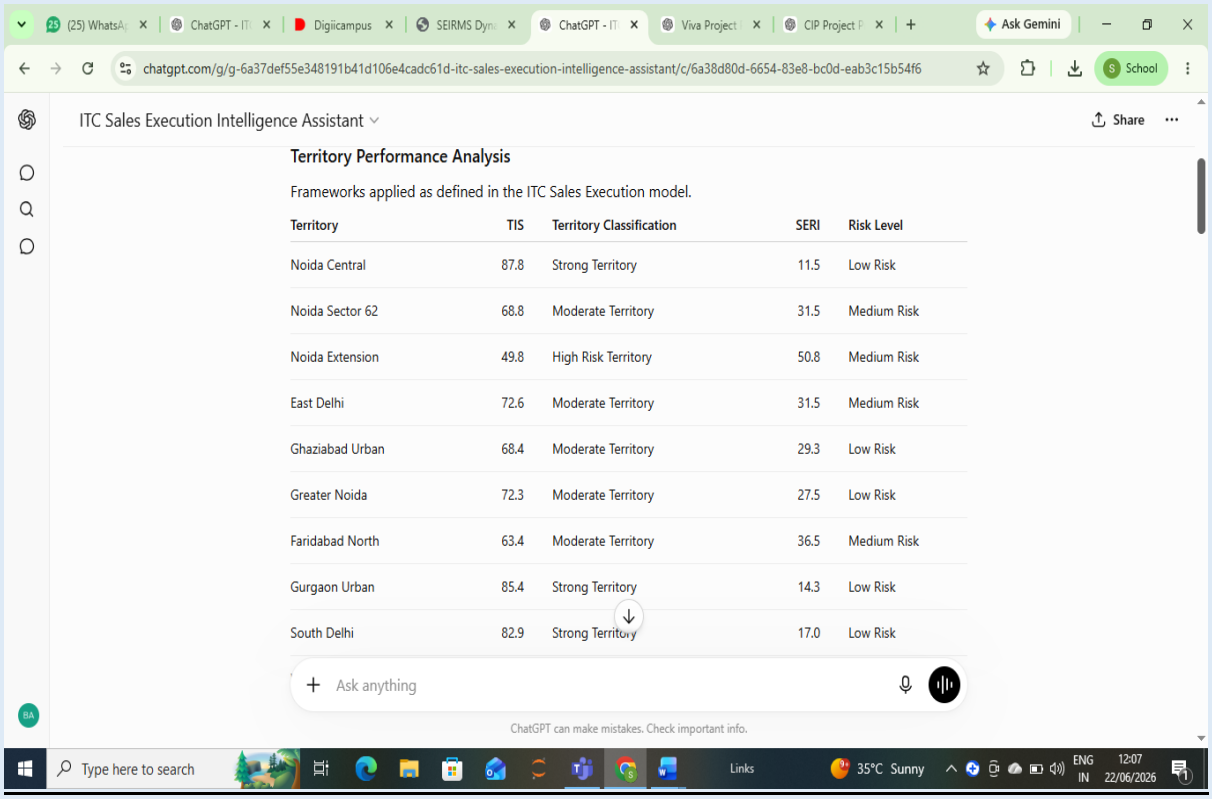

The framework enables faster identification of performance gaps, supports risk assessment, and generates structured recommendations to assist managerial decision-making. The project successfully achieved its objective of creating an AI-assisted decision-support solution for territory performance monitoring and sales execution analysis.

ITC Sales Execution Intelligence Assistant
Share
High-Risk Territories
Noida Extension
Risk Level: High Risk Territory
Key Findings:
Lowest Coverage (55)
Lowest Billing (48)
Low Stock Availability (50)
Weak Strike Rate (46)
Poor Route Productivity (44)
Reason:
Execution weakness across all core metrics is dragging down territory performance. Low coverage combined with low strike rate places the territory in the Critical Risk Zone of the Early Warning Matrix.
Recommendations:
Immediate route restructuring.
Increase outlet coverage frequency.
Improve outlet conversion through focused retailer engagement

KNOWLEDGE FILES

FILE 1: SEIRMS FRAMEWORK GUIDE

SEIRMS FRAMEWORK GUIDE

Sales Execution Intelligence & Risk Management System (SEIRMS) is an AI-assisted decision-support framework developed to transform sales execution data into actionable managerial insights.

The framework consists of three core analytical models:

1. Retail Health Score (RHS)
2. Territory Intelligence Score (TIS)
3. Sales Execution Risk Index (SERI)

Objective:

The objective of SEIRMS is to help Territory Leaders identify operational risks, evaluate outlet health, assess territory performance, and prioritize corrective actions.

FRAMEWORK FLOW:

Sales Execution Data
↓
RHS Calculation
↓
TIS Calculation
↓
SERI Assessment
↓
Risk Classification
↓
AI Recommendation

Benefits:

- Faster decision making
- Improved territory monitoring
- Early warning identification
- Risk prioritization
- AI-assisted interpretation

The framework is designed to support managerial decision-making and does not replace human judgment.

FILE 2: SALES EXECUTION METRICS REFERENCE

SALES EXECUTION METRICS REFERENCE

Coverage (%)

Definition:
Percentage of assigned outlets visited by the salesman.

Formula:
Coverage = (Visited Outlets ÷ Assigned Outlets) × 100

Business Importance:
Measures market reach and execution consistency.

Billing Frequency (%)

Definition:
Percentage of outlets generating orders or bills.

Business Importance:
Measures sales conversion effectiveness.

Stock Availability (%)

Definition:
Percentage of outlets where products are available.

Business Importance:
Ensures product accessibility and sales continuity.

Brand Visibility Score

Definition:
Measures effectiveness of product display and visibility within outlets.

Factors:
- Shelf space
- Posters
- Product placement
- Display quality

Productive Calls (%)

Definition:
Percentage of retailer interactions resulting in meaningful business discussion.

Examples:
- Order discussion
- Stock discussion
- Scheme communication

Strike Rate (%)

Definition:
Percentage of visited outlets generating orders.

Formula:
Strike Rate = (Billed Outlets ÷ Visited Outlets) × 100

Route Productivity (%)

Definition:
Measures efficiency of route execution and territory servicing.

Business Importance:
Indicates effectiveness of field operations.

FILE 3: SALES EXECUTION RISK INDEX (SERI) & RISK RULES

SALES EXECUTION RISK INDEX (SERI)

Purpose:

SERI is an early warning framework developed to identify execution risks.

Risk Components:

1. Coverage Gap Risk

Formula:
100 – Coverage

Higher score indicates higher risk.

---

2. Stock-Out Risk

Formula:
100 – Stock Availability

Higher score indicates greater stock availability concerns.

---

3. Unbilled Outlet Risk

Formula:
100 – Billing Frequency

Higher score indicates weaker order generation.

---

4. Route Productivity Risk

Formula:
100 – Route Productivity

Higher score indicates lower route efficiency.

Risk Classification

0–20 = Low Risk

21–40 = Moderate Risk

41–60 = High Risk

61–100 = Critical Risk

Managerial Guidance

Low Risk:
Maintain current performance.

Moderate Risk:
Monitor closely and implement improvements.

High Risk:
Investigate root causes and take corrective action.

Critical Risk:
Immediate intervention required.

The purpose of SERI is to support proactive decision-making and early risk identification
